

You have recently joined Autonomous Technologies in Motion (ATIM) Pty Ltd as an Associate Consultant. ATIM is a small but rapidly expanding design company in the field of robotics and autonomous technology. ATIM regularly works with charities and other companies engaged in humanitarian work. A core company value for ATIM is creating technologies that help solve current problems in an ethical and sustainable way.

At the request of several of ATIM's partner organisations, ATIM is considering designing a range of drones which can be used for applications in healthcare, conservation and other humanitarian purposes. ATIM may also consider other commercial applications such as food and postal delivery. However, ATIM is concerned that there may be ethical issues when using drone technologies in contexts in which drones will interact with people going about their lives. Therefore, ATIM has tasked its Associate Consultants with researching any ethical issues which should be considered during the design process.

ATIM provides mentoring for all its Associate Consultants, and so you will be able to work with communications experts throughout the research and publication process to ensure your work meets ATIM's high standards.
